## THE WALL STREET FLURRY.

What the Solomon of the Street Has to Say About It.

The late little flurry in Wall street caused much fear all over the country, and the sudden change in affairs was as surprising as it was rapid.

Russell Sage, the Wall street Solomon, said the other day: "I believe that we shall have a better market for the balance of the year than we have been having for the past sixty days, for the reason that the country has been blessed with an abundant harvest and a general accumulation of wealth such as never existed before. The depression was caused by the overproduction of manufactures of every kind and of the necessities of life. During the past eight months proper consideration has been given to the demand for them. When we get over the striking disposition of the people as shown in the country, which is now happily and sensibly disposed of by the iron and steel workers, we can look for the steady progress of the country. One of the most encouraging signs for the future is the fact that our people and banks have abundant capital at a reasonable rate of interest to enable the business and productive of the soil to be utilized in the most economical and satisfactory manner. Therefore, do not expect a panic from an occasional failure, which is only an incident in the era which not only this country, but the civilized world, has been passing through for three years. I shall be disappointed if the year goes by without a more encouraging outlook for the year to come than the two years which have just passed."

"What condition will Wall street be left in by the depression of the market?"

"The effect will be smaller volume of speculative business than we have been doing during the past three years. But this will work good, as many inconsiderate and wild schemes had been organized and introduced in Wall street that led to heavy losses and a market of trading not approved by the better class of thinking people throughout the country, so that with a reduced volume of business and on a basis that cannot be regarded as a precedent for the future, the market will be a more legitimate and reliable business than has been done before in five years. I consider it fortunate that so few failures have occurred during the past three years, and that the market has been able to weather the decline for eight months."

"How does this speak for the country?"

"It speaks well, because it shows the large accumulated profits that make up a wealthy and prosperous country all around with the same civilization. Take, for example, the recent suspension of the two banks in Indianapolis. Although they were closed as rather under a cloud before their suspension, we see that there was deposited in one of them \$1,000,000. In no previous period in the history of the country has such a decline taken place without a great and disastrous panic to precipitate it."
